Abstract

Two decades of digital changes have fostered an increasingly complex threat landscape, forcing dramatic transformations in the CISO's job.

Now that cyber security is finally acknowledged as a bona fide enterprise risk, CISOs are being tested to stretch beyond their technical roots and embrace a role that demands the full range of leadership and management skills exemplified by others in the C-suite.

An increasingly complex threat landscape coupled with an active regulatory climate has elevated security issues to the highest echelons of corporate management. At the same time, companies are venturing deeper into digital transformation, shifting critical business processes and revenue opportunities online, which requires proper safeguards. Being a CISO, what's next ...

Biography

Sam Tong serves as the Senior Principal Systems Engineer in Symantec Corporation. Mr Tong has more than 16 years of experience in cyber security solutions, cloud security solutions, project management and managed security solutions providing advice to defence, multinationals, financial institutions, and government.

Mr. Tong joined Symantec as a security consultant in 2006. Mr. Tong was involved in the sales and delivery of security advisory, long-term consultants, and managed services. Mr. Tong has been a trusted advisor to enterprise customers, providing professional situation analysis and advices to enhance their cyber security protection with Symantec's cutting edge solutions and technologies.

Prior to joining Symantec, Mr. Tong had held different regional positions in project design and project management roles for various large enterprise vendors. His expertise lies mainly in the areas of Internet security technology, network threat detection and cloud security solutions.

Mr. Tong holds a Bachelor's degree of Engineering from Chinese University of Hong Kong and professional qualifications such as CISSP, CISA, ITIL and BCCP.
